KYCS Locate

Asset Location Solution

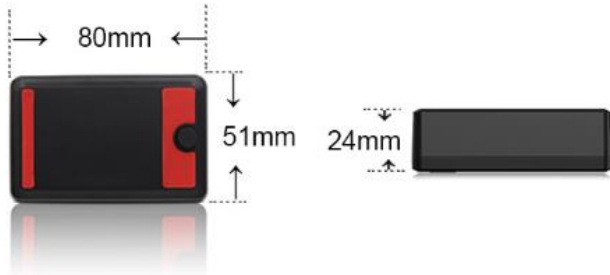

Providing Dealerships Versatility:

Inventory Management & Lot Protection, Theft Recovery, Safe Test-Drives, Rental Fleet Protections and Non-Payment Repossession

The Only Solution Backed By Crime Stoppers!

Easy Install

Tracking

Battery Detect

Tamper Alarm

KYCS Locate Recovery Device

- No Monthly Fees – includes 4 years of service
- Virtually undetectable by thieves/frequency scanners. KYCS Locate device shuts down and does not transmit any signals until ready to send the next update at pre-determined interval time
- Proprietary firmware and components allow for extended battery life and reduced data transmission
- Up to 5-year battery life at 1 location ping per day – online battery-level monitor – replaceable battery (to customer)
- Simple installation, no wiring (self-powered), high powered magnets or 3M adhesive
- Does not affect manufacturers warranty (no OBD plugin)
- Weatherproof industrial housing
- Tamper-proof alert + removal alarm
- Coverage where cellular service is available
- Companion online portal and KYCS Locate mobile App

How Factory Installed GPS Tracking Devices Are Disabled

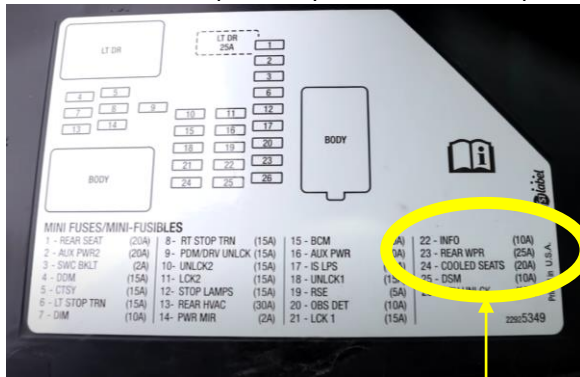

- **All GPS Tracking systems require an antenna** to send and receive data regardless of whether the GPS system is built into the firmware of the vehicle's CPU.
- **Major flaw in all factory installed GPS systems:** they are all installed in the same place, easily disabled
- KYCS Locate's antenna is located within the device itself, which is installed covertly

3 Simple options on how to disable your factory installed

Option 1

Simply remove the Tracking/GPS Fuse
(example of OnStar)

E.g. Fuse 22 "INFO" is the GPS fuse.

Simply remove the fuse and the Manufacturer GPS system is disabled.

Option 2

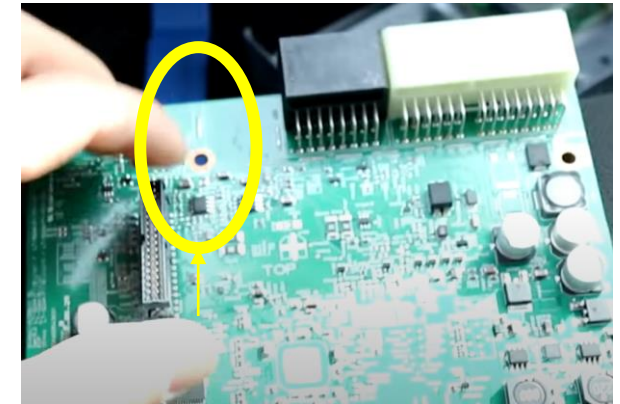

Simply remove or disconnect the GPS antenna

Simply disconnect the GPS antenna

Option 3

Simply remove the serial antenna port from the CPU

Remove Antenna serial port from the CPU. Manufacturer system is disabled.

How Factory Installed GPS Tracking Devices Are Disabled

- Great solution for telematics, fleet management, data collection – **not designed for recovery**
- **OEM/GPS tracking systems repeatedly emit signals** making them highly susceptible to prompt detection and removal by thieves

Radio Frequency (RF) Scanner

Used to locate tracking devices installed in vehicles

- YouTube tutorials
- RF scanners on Amazon \$65.00

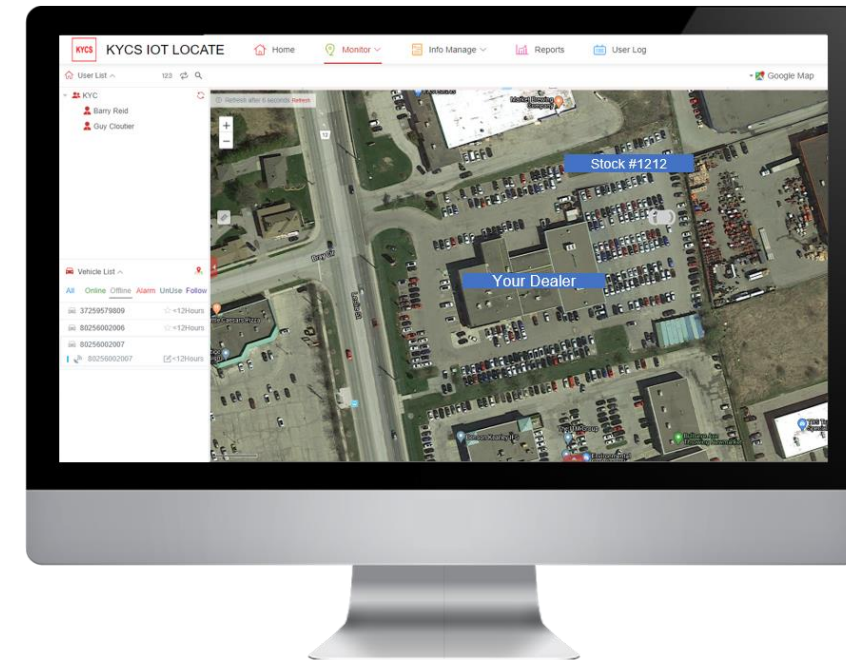

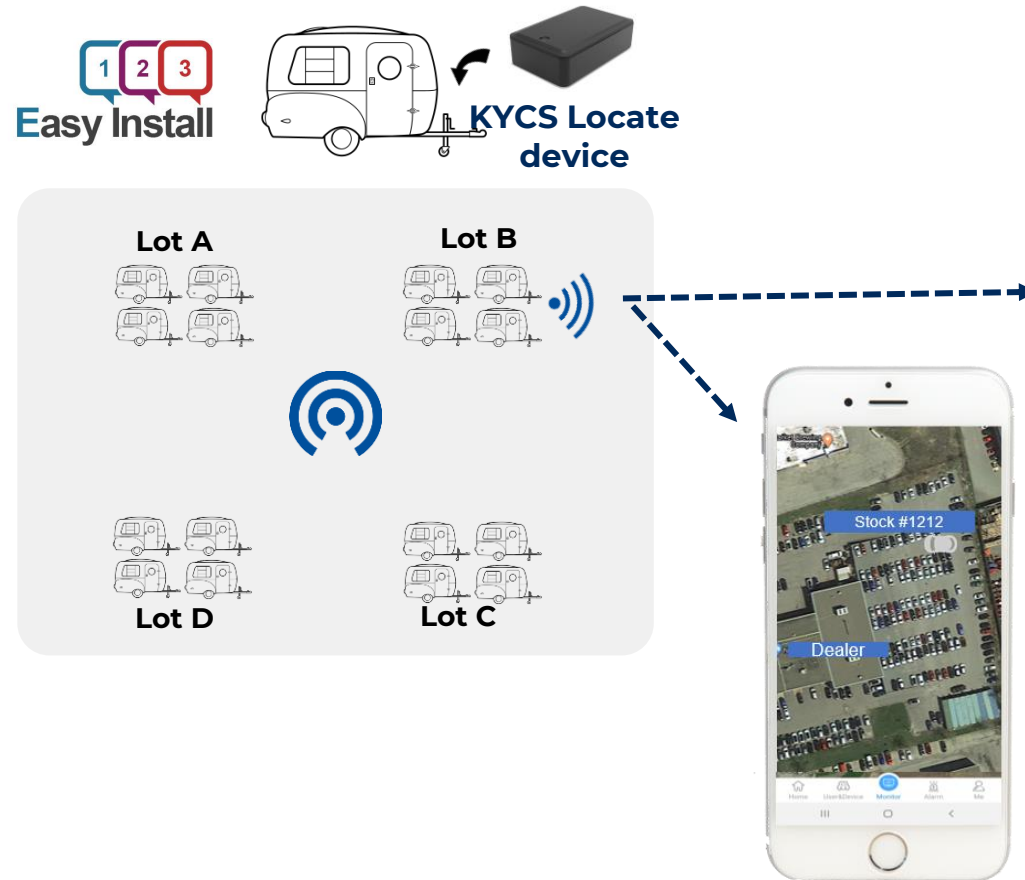

RV Theft on the rise

Dealerships and customers experiencing rising thefts of RVs and Trailers

- **RVs and Trailers rarely recovered**
- **Only recourse seems to be posting to Facebook**

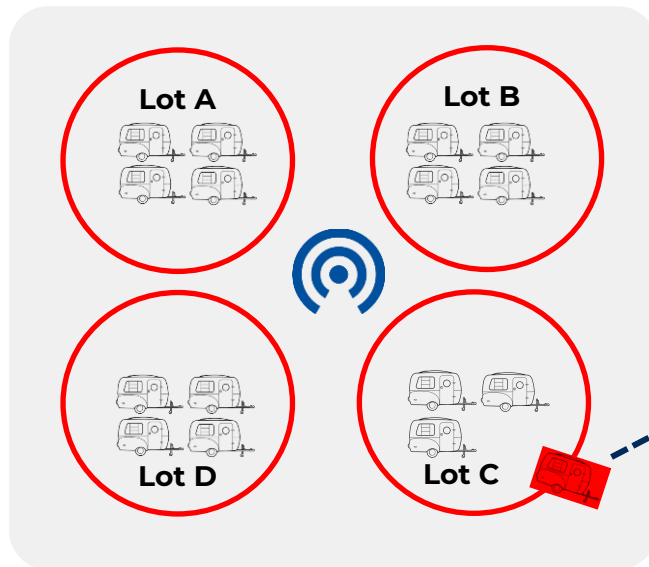

Real-Time Location

Assets are equipped with KYCS Locate Devices. Locate communicates through the Locate web platform and mobile app. The KYCS Locate devices are self-powered and do not require a service tech for installation.

Lot Protection – Geo Fence Customization

If an asset is stolen from a Dealership's lot overnight, the geo fence will be activated and upon the morning ping a notification will be sent to the dealership and KYCS's monitoring team. Then, through its partnership with Crime Stoppers, KYCS will actively track the asset.

Crime Stoppers ID

Crime Stoppers Difference

Information Displayed

- Confirmation that vehicle is indeed stolen
- Police incident number
- Date, City, State of theft
- Phone number of warranty administrator
